

### Environmental Policy

Our Long Ashton site is our operations base for the installation of renewable energy systems – principally solar thermal and photovoltaic.

Solarsense UK demonstrates its commitment to the environment by encouraging all employees to:

*“consider the protection of the environment as a pre-requisite before undertaking any task”*

We will reduce our environmental impact by:

- Minimising pollution to air, water and land
- Reducing waste, water and energy use throughout our operations.
- Conserving natural resources through purchasing environmentally friendly products rather than cheaper alternatives.
- Recycling waste and disposing correctly of waste we are unable to recycle
- Continually monitoring and improving our environmental performance
- Complying with and endeavouring to exceed the requirements of all relevant legislation
- Assessing the environmental impact of all operations past, present and future
- Working with our suppliers to encourage greater environmental awareness and achievement of ISO 14001
- Educating and training all employees in environmental issues enabling everyone to help preserve the environment
- Maintaining good relationships with the local authority and community
- Ensuring the environmental impact is considered when altering any processes.
