

## Brabantia

Nailsea, South West UK

**Technology:** Solar PV

**System size:** 250kWp

**Annual Output:** 280,500kWh

**Annual CO2 savings:** 148,000kg

From modest beginnings back in 1919, Brabantia has grown into a global interior design brand, renowned for bringing smart and stylish design to kitchen and homeware.

The company manufactures practical solutions for the home, including waste management, laundry care and bathroom accessories.

Brabantia operates from a 56,000 square ft factory based in Nailsea. Due to the enormous amount of energy they consume on-site, they contacted Solarsense to explore the savings that could be made by installing commercial solar panels.

The new system is comprised of 1000 solar panels and has dramatically reduced the company's overheads. The total net benefit projected over a 20-year period is in excess of £1.5 million.
