

Duchy of Cornwall

Gloucestershire, South West UK

Technology: Solar PV
System size: 99.64kWp
Annual Output: 98,850kWh
Annual CO2 savings: 52.34 tons

Solarsense has been working with the Duchy of Cornwall on their on-going solar projects since 2011. Our on-going relationships with high profile clients is a testament to the professional service we offer and our ability to deliver reliable installations.

The Duchy of Cornwall makes considerable investments in renewable energy. These include biomass, ground source and solar photovoltaic projects, which simultaneously serve as tangible examples of best practice, reduce the estate's carbon footprint, and generate income.

To date Solarsense has installed four solar PV arrays for the Duchy of Cornwall, ranging from typical roof-mounted systems to integrated (BIPV) arrays as pictured below.
